

## Only available at Al Barsha Veterinary Clinic !!

As the only clinic in the U.A.E., Al Barsha Veterinary Clinic introduces the **CZAM-D4**, the 1st Smart Pet food Dispenser.

You have several pets in your household and you want to give them specific diets adapted to their age, sex, size, exercise regime and health condition; or one of them needs to follow a course of treatment or needs an additional food supplement. With the new smart automatic dispenser CZAMD4, we now have the solution to make sure your pets eat the correct food!

A medallion fixed to the pet's neck allows C-zamD4 to clearly identify the pet coming forward and present the right diet. The pet eats without being able to access other compartments. The flap closes automatically when the pet moves away or when another pet wearing a different medallion comes to share his food or keep him company.

This Smart Dispenser has four compartments and can receive up to four types of pet food. CZAMD4 has been invented by a reputable Maine Coon breeder and has been selected by Royal Canin to carry out food tasting in their kennel & cattery in France!

Rush now to our Clinic, we only have a limited stock available!
